RG HotelOS — owner's quick start

Your server is the PC in the office running RG HotelOS. Leave it on, on the UPS, connected to the router. Staff use tablets, phones or PCs on the hotel Wi-Fi; nothing needs the internet except M-Pesa prompts, Google Drive backups and updates.

Every day it does by itself

- Night audit at 23:59 puts each occupied room's night on the guest's bill, and prints the **day close (Z) report**.
- Backups every 15 minutes on the server; a daily copy to Google Drive and to the USB drive when it's plugged in.
- Updates from RG Devs install at night (02:00–05:00) only when nobody is working, and undo themselves if anything goes wrong.

Your home screen (admin)

Revenue today, money in (cash vs M-Pesa), occupancy, open orders, and **alerts**: printer down, backup problem, the server's clock was changed, update ready, licence. Press **Seen** once dealt with.

Who does what

Person	Uses
Receptionist	Reception (room grid, bookings, check-in/out), Clock in/out station
Waiter	Orders (tables, takeaway, room service)
Kitchen / bar	Kitchen screen, or just the printed tickets
Cashier	Cashier: open shift with the float, take payments, close shift with a cash count
Housekeeping	Housekeeping: rooms to clean, report a fault
Storekeeper	Stock: receive deliveries, adjust, count
Finance	Finance (imprest, expenses), Pay (salaries, advances, pay sheet), M-Pesa checks
Manager	Everything day to day: staff, approvals, attendance, reports

Money rules you can rely on

- Nothing financial is deleted or edited. Mistakes are reversed with a reason, and the audit log keeps who did what.
- Discounts beyond your limit, refunds, and guests leaving with a balance need a manager's PIN on the same device.
- M-Pesa prompts count as paid only when Safaricom confirms. Typed M-Pesa codes stay "unverified" until finance checks them against the statement.

Keep safe, away from the server

1. The **admin recovery key** (from setup): lets you back in if the admin PIN is lost.
2. The **Backup Recovery Sheet**: the only key that opens your backups. Without it, backups can't be restored.
3. The **USB backup drive**: plug it in once a day or two; it copies by itself. Keep it at home.

If the server breaks or is stolen

Get a new PC → install RG HotelOS → on the first screen choose **Restore a backup instead** → plug in the USB drive (or download the latest file from your Google Drive "RG HotelOS backups" folder) → type the recovery key → restart. Contact RG Devs to move the licence to the new PC.

RG Devs support

Email **rgdev.ke@gmail.com** · WhatsApp **+254 140 205 383**. The Licence screen has Email and WhatsApp buttons that send your hotel name and the computer's machine code for you.

Reports

Reports → choose one and a period (today … this year) → **Excel** or **Print / PDF**.
